Relationship between Business and Biodiversity

**Inputs**
- Energy resources: Electricity • Fuel • Crude oil
- Mineral resources: Steel • Aluminum • Copper
- Renewable resources: Wood

**Outputs**
- Atmosphere: CO₂ • SOx • NOx
- Water: Metal compounds
- Soil: Industrial wastes

**Ecosystem impact ratio**
- Procurement: 37%
- Production: 2%
- Logistics: 3%
- Use: 45%
- Disposal: 13%

Inputs and outputs include indirect ecosystem impact factors.

**Risks**
- Climate change
- Pollution
- Biological resource loss
- Habitat loss
- Invasive alien species

**Contributions**
- Greenhouse gas reduction
- Chemical substances management
- Forest protection
- Habitat protection
- Endemic species protection

**The ecosystem impact ratio is calculated through LCA. (Life cycle inventory database : IDEA Ver. 2.3)**
