

Internal Environmental Commendation System

The Brother Group, which has business sites in more than 40 countries and regions around the world and undertakes business globally, has a commendation system known as the 5R Award to motivate and improve the level of environmental activities of the entire group. Environmental activities conducted by group companies during the previous fiscal year are subject to commendation.

In FY2020 (April 1, 2020-March 31, 2021), to prevent the spread of COVID-19, a survey regarding biodiversity conservation activities was conducted in place of the annual ceremony for the Environmental 5R Awards Competition. Out of the 64 business sites surveyed, 57 of them conducted a total of 80 biodiversity conservation activities in FY2019. Brother Industries, Ltd. (BIL), the headquarters, awarded letters of appreciation to business sites which were assessed to have contributed significantly to the Brother Group's environmental conservation activities, based on factors such as the number of activities conducted, the number of years of continued efforts, and recognition by external organizations.
