Relationship between Business and Biodiversity

Calculating the ecosystem impact ratio at each stage from the results of LCA when the total impact per product is 100. (Life cycle inventory database: IDEA Ver. 2.3)

Inputs and outputs include indirect ecosystem impact factors.

Impacts of inputs and outputs on ecosystem

Climate change

Pollution

Biological resource loss

Habitat loss

Contributions

Ecosystem conservation activities to reduce impacts

Greenhouse gas reduction

Use of renewable energy

Chemical substances management Resource circulation Recycle

Forest protection

Support for CoolEarth

Habitat protection

Brother's Forest Gujo

Endemic species protection
Prevention of invasion alien species into containers
